UNIT OF INSTRUCTION: MOVEMENT

STANDARD STATEMENT A:

OBJECTIVE: Demonstrate Locomotor Skills

OBJECTIVE: Demonstrate Non-Locomotor Skills

OBJECTIVE: Demonstrate Movement Within Personal Space

- **Physical Activity**: Bodily movement that is produced by the contraction of skeletal muscle and which substantially increases energy expenditure.

- **Physical Fitness**: A set of attributes that people have or achieve and that relate to their ability to perform physical activity. Generally accepted to consist of health-related fitness and skill-related fitness.

- **Locomotor Skills**: Movements producing physical displacement of the body, usually identified by weight transference via the feet. Basic locomotor steps are the walk, run, hop and jump as well as the irregular rhythmic combinations of the skip, slide and gallop.

  - **Walk**: one foot is always in contact with the floor.
  - **Run**: head is up and the knees are lifted.
  - **Jump**: two foot take off and a two foot landing.
  - **Hop**: one foot take off and one foot (same foot) landing.
  - **Leap**: body takes off from one foot and lands on the other foot.
  - **Gallop**: one foot leads and uses a step draw action (forward or backward).
  - **Slide**: one foot leads and uses a step draw action (sideways).
  - **Skip**: one foot steps and hops forward then alternate feet using the same step hop motion.

- **Concept Development**: model a picture.

- **Assessment**: locomotor, non-locomotor, dance, gymnastics
• **Non-locomotor Skills:** Movements that do not produce physical displacement of the body.

  - **Bend:** Body parts come closer together.
  - **Stretch:** Body parts become straighter.
  - **Swing:** Body parts have free forward and backward movement.
  - **Sway:** Body parts have controlled side to side movement.
  - **Twist:** Body parts rotate at a joint.
  - **Turn:** Body faces a new direction.
  - **Pull:** Body parts drag an object.
  - **Push:** Body parts press against an object.
  - **Shake:** Body parts have a quick back and forth movement.
  - **Strain:** Body parts become tight or tense

• **Ready Position**

  - **Movement Ready Position** (Instable creates a quick, controlled fall)
    - **Speed**
      - Narrow base of support-Foot slightly apart.
