How Can I Edit PDF Assignments so I Don't Have to Print the PDF?

Please consider downloading KAMI. KAMI is a PDF tool that allows you to "write over" the PDFs (among other things). This will basically eliminate the need for students to have to print. KAMI works with ChromeBooks. KAMI has enabled the tool for all users with @students.pmsd.org accounts. Each user does need to login/sign-up in order for it to work.

Users need to login to the site/app in order for it to work:
1. Go to https://web.kamihq.com/web/viewer.html
2. When the login/sign-up box comes up, click the WITH GOOGLE button.
3. Choose the account that you want to login with.
4. Allow all of the permissions that KAMI requires to run and CLICK THE ALLOW button.
5. Select K-12 School from the list of choices.
5. Select the correct role (student, teacher, other).
6. Click FINISH.

There is a short KAMI information video to watch. Then click CONTINUE. At this point, it is live and functional.

Here are some additional KAMI resources to help students & parent learn more about KAMI:
